

Hoodoo

uStudio Connector for AEM

Installation guide

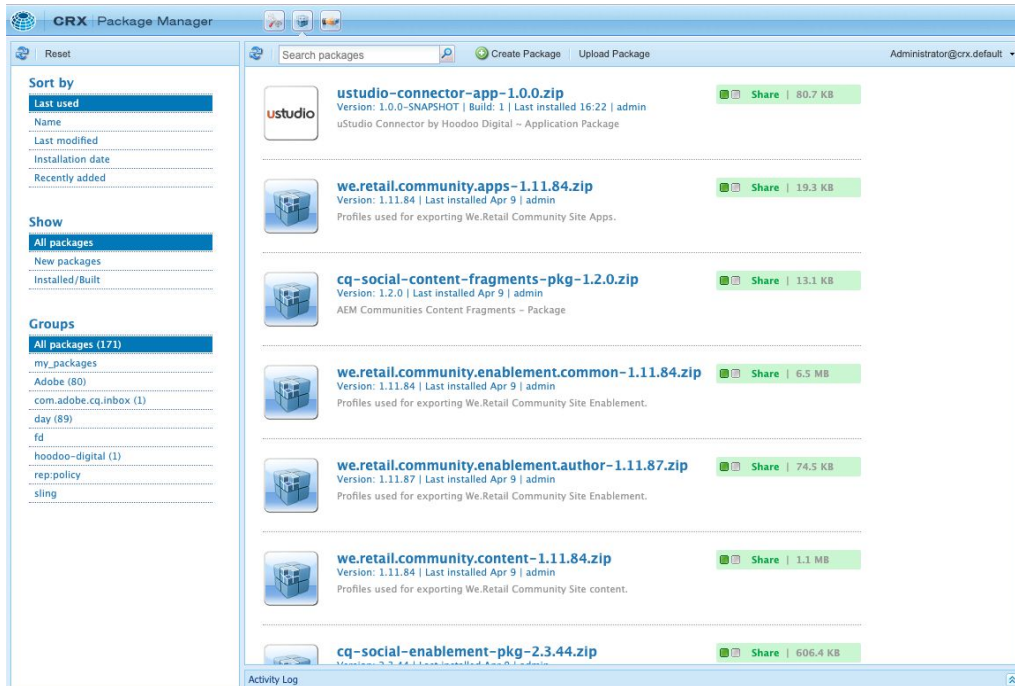

Package Install

1. The connector will be available for download from the creator, Hoodoo Digital. The format will be a zip file.
2. Once the file is downloaded, log in to your AEM environment and navigate to Tools → Deployment → Packages.

3. Upon clicking Packages you will be taken to the CRX Package Manager.
4. Click the Upload Package button at the top of the screen. This will bring up an operating system prompt for your computer that will allow you to browse to the location where the ZIP FILE is at.
5. Select it and then the package will appear in the main list of other packages.

Hoodoo

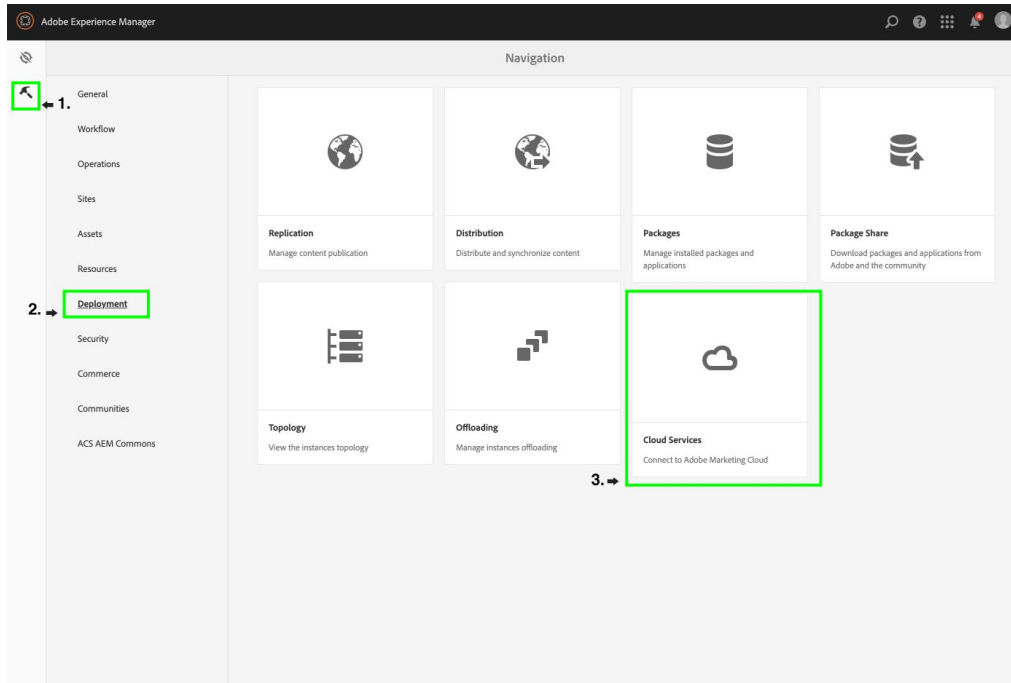

6. Click the Install button to begin the installation process.
7. Once the installation has been completed then you can close out the CRX Package Manager window.

Configuring the Connector

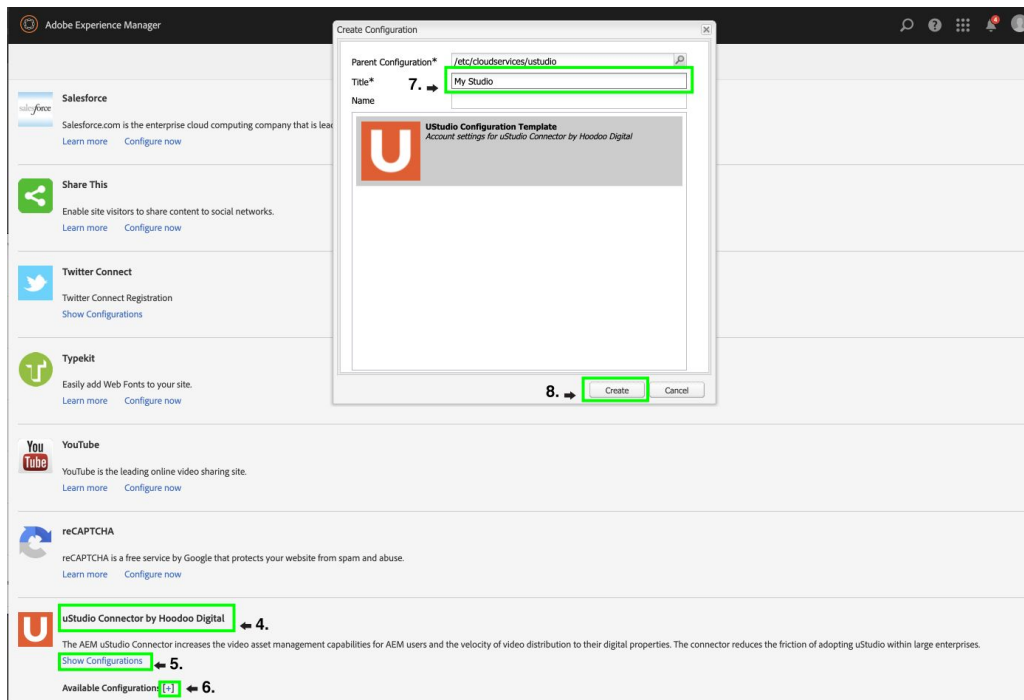

1. On the main AEM start page, begin by clicking on the Tools icon.
2. Then click on the deployment option in the left navigation.
3. Next, click on the cloud services icon to configure the uStudio account.

4. Scroll down until you locate the uStudio Connector.
5. Click on the "Show Configurations" link.
6. Click on "Available Configurations (+)".
7. Give the configuration a title.

Hoodoo

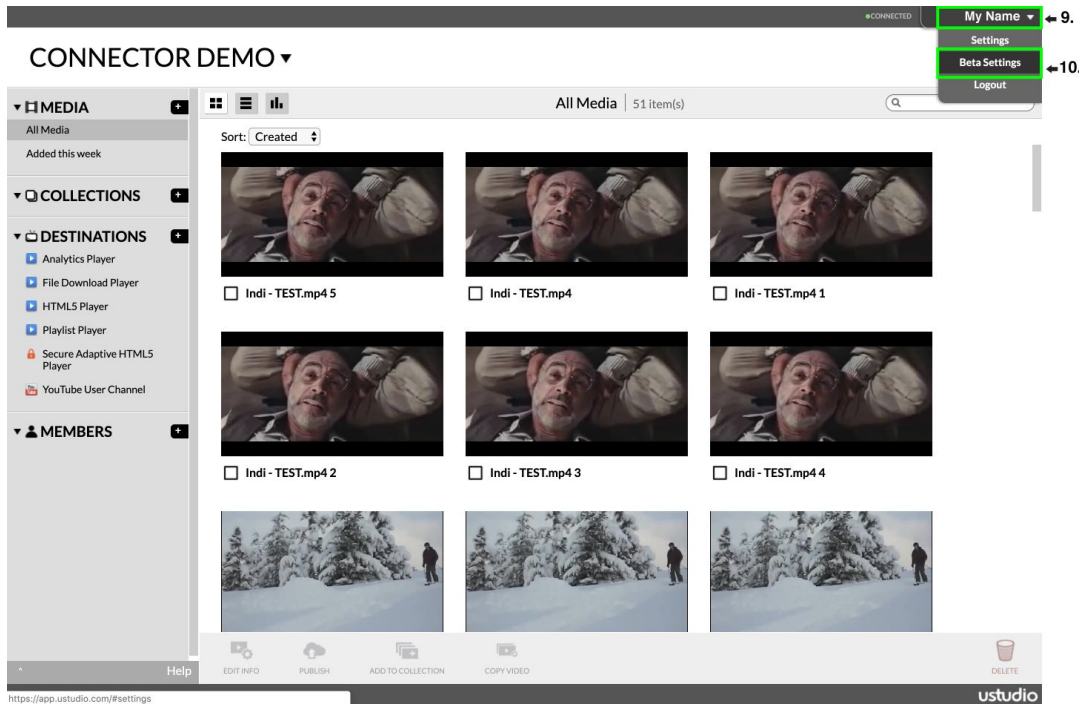

8. Click on the Create button.

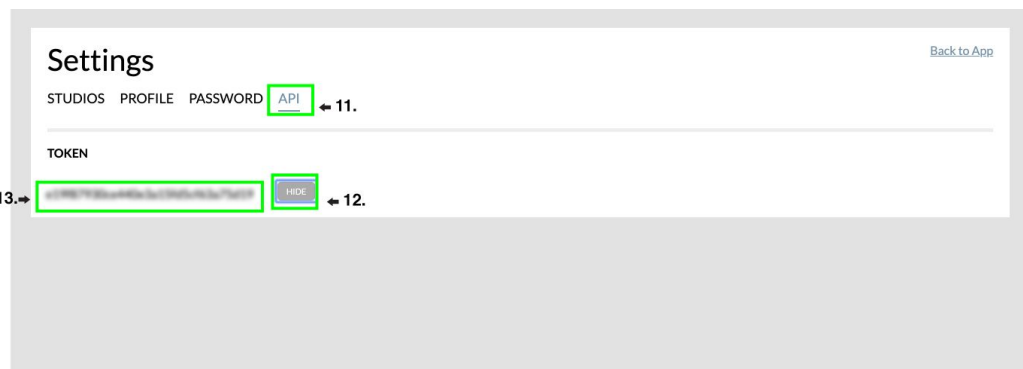

NOTE: At this point, you will need to log into your uStudio account to get the api token id that is needed for the next step in the configuration. Go to <https://app.uStudio.com>.

9. In the top right corner, click on the username.
10. Then click on beta settings.

Hoodoo

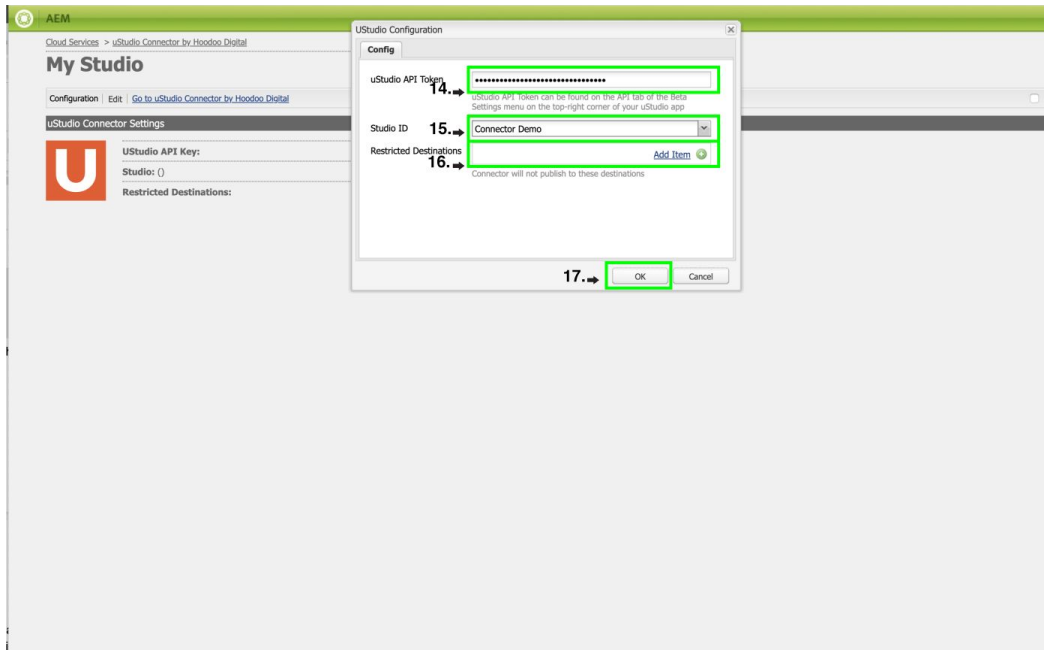

11. Once in the settings menu, Click on API tab.
12. Click the show/hide button to display your api token.
13. Copy the api token for your account.

14. Go back to the configuration dialog in AEM and enter the api token.
15. Select the studio id from the dropdown list.
16. Select any restricted destinations, if any.

Hoodoo

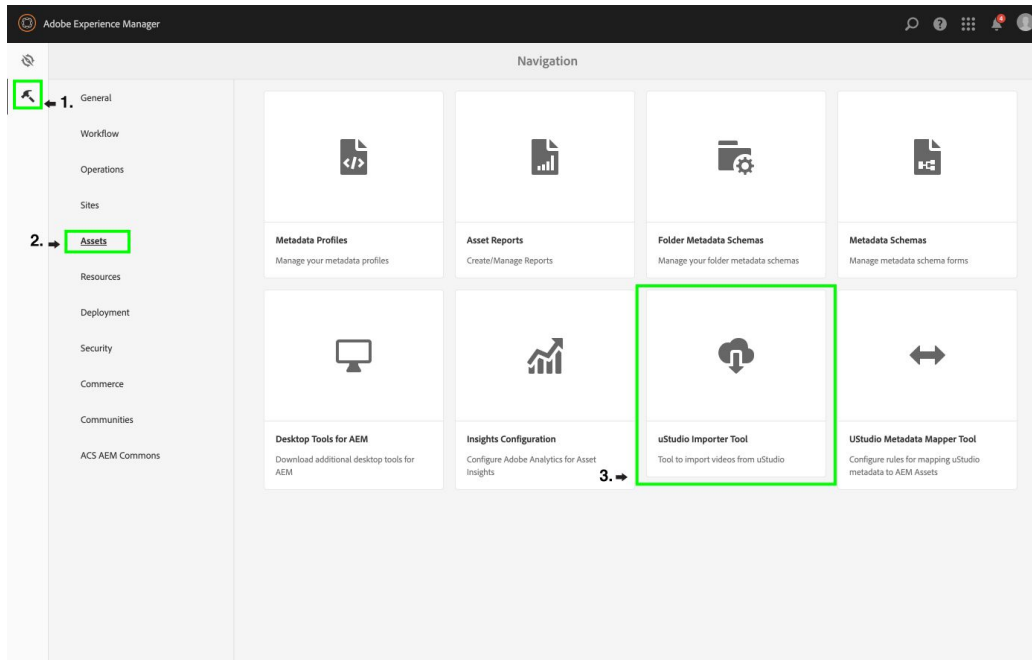

17. Click OK

How to use the uStudio Importer Tool

1. On the main AEM start page, begin by clicking on the Tools icon.
2. Then click on the Assets option in the left navigation.
3. Finally, click on the uStudio importer tool icon to use the connector.

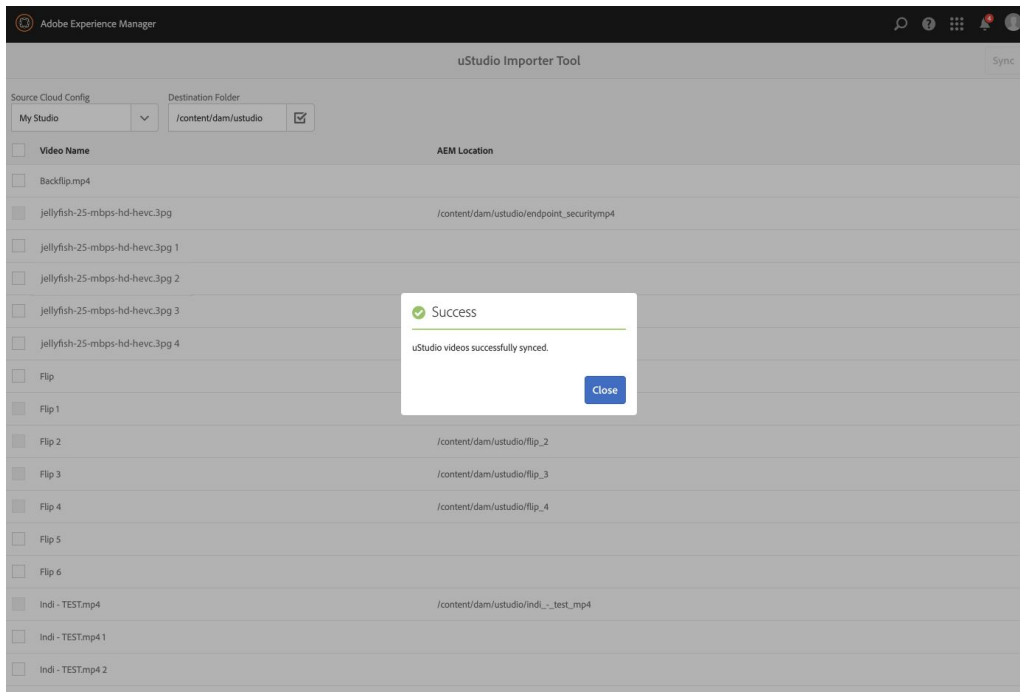

4. Select the uStudio configuration channel from the first dropdown to see the videos uploaded into it on uStudio's side.
5. Select the AEM Destination folder that the videos will be copied into once synced with AEM.
6. Check the checkboxes to choose the studio videos from the list below that you would like to be copied into AEM.
7. Click on the Sync button on the top right corner.
8. Then click Sync on the pop up dialog.

Hoodoo

9. If the sync is successful, a success message will appear and the asset's url will appear under the AEM Location column.
