

# Installation guide - Straker Translations connector for AEM 6.3

1. The connector will be downloaded in a zip file format, there is no need to unzip this file.
2. Once you have the file downloaded, login to your AEM environment and navigate to “Settings > Deployment > Packages”

3. You will enter a new interface where you will be able to upload the AEM connector package. Simply click on the “Upload Package” button, you will then need to browse to where you saved the zip package to. Select it and the package will now appear on the main panel with the other packages. From here you can opt to install the package.

4. You will be asked for confirmation to install the package and provided with advanced settings should you wish to check these. However this is an entirely optional process and you can simply select “Install”. An activity log will appear and the installation will begin. Once it has finished, you should see in the activity log that the package was imported and installed.
